YUVAKRISHNA THANNERU

SENIOR BUSINESS ANALYST | ANALYTICS & BUSINESS INTELLIGENCE | SUPPLY CHAIN & OPERATIONS

t.yuvakrishna@gmail.com | linkedin.com/in/yuvakrishna15 | Portfolio | Chicago, IL · Open to Relocate

SUMMARY

Senior Business Analyst at Walgreens who turns messy operational data into trusted metrics and decisions across a 15-site pharmacy fulfillment network. Builds governed data models, Power BI semantic models in Microsoft Fabric and automated pipelines, recovers value from returns and supplier credits, and presents findings to site directors and regional VPs.

SKILLS

Analytics & Modeling: advanced SQL, Python, statistical and trend analysis, KPI definition, data modeling, semantic models

BI & Data Platforms: Power BI (DAX), Microsoft Fabric, Tableau, Databricks, Snowflake, Azure Synapse, BigQuery, Spark, Airflow

Supply Chain & Operations: inventory management, reverse logistics, returns and salvage recovery, capacity analysis, SAP

Partnership: stakeholder alignment, executive presentations, cross-functional programs, coaching analysts

CERTIFICATIONS

Google Professional Data Engineer | AWS Solutions Architect – Associate | Power BI Certificate

Snowflake SnowPro Core | Advanced SQL (HackerRank)

EXPERIENCE

Senior Business Analyst | Walgreens

Aug 2025 – Present

- Led a cross-functional program with Operations and Asset Protection to standardize KPI definitions and consolidate inventory reporting for 15 MFCs into one Power BI semantic model on Microsoft Fabric, the **single source of truth** for site performance.
- Ran **statistical analysis** on fill and abandonment patterns across **78M prescription records** to diagnose drop-off drivers, identifying **2.2M pack-eligible abandoned prescriptions** to guide product-selection and patient-retention decisions.
- Built an **SAP**-to-IDI inter-store transfer reconciliation using Databricks SQL and Power BI, matching **10K+ daily records** by site, article and transfer code to flag quantity discrepancies and replace manual SAP extract comparisons.
- Drove inventory and financial-control analytics across 15 Micro Fulfillment Centers, integrating inventory, returns and cost data to pinpoint adjustment drivers, contributing to a **37%** reduction in targeted high-cost inventory adjustments.
- Built hazardous-waste monitoring across 15 pharmacy fulfillment centers to flag recoverable product wrongly routed to HazWaste, surfacing **~$300K** in potential value recovery and letting site teams intervene before inventory was lost.
- Applied **trend analysis** to network-wide Amber Vial demand to shape **FY27 planning**, tracking excess-stock burn-down site by site and supporting a **3M+** vial reduction over nine months, worth more than **$7M** in excess inventory value.
- Architected the KPI framework for a regional pharmacy workforce pilot, defining and measuring workload and performance across **6 core workflows**, directly informing leadership's decision on a chain-wide rollout of the model.
- Replaced manual Excel appends with end-to-end reconciliation-file ingestion in Azure Logic Apps and Databricks SQL MERGE, cutting **7+ hours** a week and giving 3 support teams and leadership one trusted self-service Power BI dataset.
- Designed the **MFC Vendor Credit** Summary and Detail report, reconciling multi-million-dollar shipped claims against received credits, rejected returns and open balances so Operations could prioritize and chase supplier credit recovery.
- Created salvage and returns dashboards tracking claim status, cost trends and drug-class mix across sites, helping Operations target the highest-impact locations and contributing to a **20%** reduction in aging salvage claims and faster returns.
- Owned pre/post-launch analytics for **new micro-fulfillment centers**, comparing fulfillment performance and pharmacy workloads against baselines to assess capacity, cost-to-fill efficiency and staffing gaps as each site ramped.
- Automated weekly **financial-controls** reporting with Python and Outlook VBA, organizing audit evidence so reviewers could find it fast; the framework was **adopted by other teams** as their standard weekly controls reporting process.
- Present cost, operational and financial-risk findings to **site directors** and regional **VPs** as executive-ready recommendations, flagging risks early and turning complex data into prioritized process improvements and site-level next steps.
- Coach junior analysts on business context, SQL result validation, data modeling and Power BI report design, building a team that owns its analyses end to end and delivers trusted, decision-ready reporting to site and regional leadership.

ADDITIONAL EXPERIENCE

Research Analyst | Northern Illinois University

Sep 2024 – Jun 2025

- Built an automated data pipeline using Azure Synapse and Apache Airflow, processing **10,000+** social media posts daily for behavioral-health research, reducing data latency by **50%** and improving research scalability for the research team.
- Built ETL workflows integrating PySpark and T-SQL for structured and semi-structured data, giving the research team faster, more reliable access to analysis-ready data and a **30%** improvement in query performance and resource utilization.
- Applied **NLP** techniques including sentiment analysis and topic modeling to analyze language patterns and identify early signs of mental-health concerns among social media users, turning unstructured text into structured research insights.
- Implemented role-based access controls (**RBAC**) in Azure Synapse and Azure Key Vault, applying data-ethics protocols modeled after HIPAA compliance so sensitive health and user data stayed protected throughout the full research lifecycle.

Project Engineer | Wipro, Client: Citi Bank

Jun 2021 – Jun 2022

- Performed exploratory data analysis on **1M+** financial transactions with SQL and Python, uncovering compliance risks and payment discrepancies, improving reporting accuracy and reducing payment-related defects by **18%** for the client.
- Built SQL data-validation rules and fraud-detection queries to flag non-compliant and high-risk transactions, strengthening transaction risk monitoring and accelerating non-compliance identification by **30%** for the client's compliance teams.
- Partnered with compliance officers, risk analysts and project engineers through UAT for compliance reporting, troubleshooting data issues and resolving **80%** of discrepancies before production release to keep compliance reporting audit-ready.
- Developed advanced Excel dashboards with PivotTables, Power Query and VBA macros to analyze and visualize financial metrics and automate recurring calculations, improving reporting efficiency by **25%** for finance and business stakeholders.
- Produced **Tableau** dashboards tracking onboarding trend forecasts, approval rates and compliance adherence, giving business and compliance stakeholders near real-time visibility into transaction workflows and core financial KPIs.
- Built and optimized SQL transformations in a **10TB+** Snowflake enterprise data warehouse (EDW) supporting compliance and business-intelligence reporting, reducing query times by **40%** for downstream reporting and analytics teams.
- Automated ETL and validation workflows across the client's existing **AWS** and Snowflake data platforms, streamlining data preprocessing, validation and reporting, and reducing manual compliance reporting effort by **35%** for analysts.

EDUCATION

M.S., Computer Science | Northern Illinois University | May 2024 | GPA: 3.71/4.0 | Merit Scholarship

B.E., Electronics & Communication Engineering | Sathyabama University | May 2021
